## Tango Networks Information Communication Technology “ICT”

Tango Networks designs, supplies, and installs the full technology and security package to meet ANSI, CSA, and CEC standards. Designs are stamped by a professional engineer. Tango negotiates cellular and fiber data connections, and issues tenders on behalf of building owners.

Tango is vendor agnostic and works with owners, architects, and general contractors as part of their design and build teams. Tango maintains existing ICT networks and becomes part of owner and developer strategy teams.

## Communication Networks

Tango designs cabling and IT networks that connect people and devices (IoT). The connected devices include door access control, security cameras, intercoms, paging systems, digital signs, cellular systems, computer networks, remote access connections, and data centers. Tango provides outside plant design to connect the building to others.

## Security Design

Security requirements vary significantly between Hotels, residential, commercial, industrial, and public spaces. Tango works in all industries using a tailored approach. Clients served include Oilers Entertainment Group, JW Marriott, Sky and Legends condominiums, Edmonton Tower, Stantec Tower, ICE District pedways, and ICE District podium. Tango provides outside plant design to connect the building to others.

## Digital Media and Advertising

Tango provides technology for events and meeting places such as concert venues, event spaces, hotel ballrooms, meeting spaces, district-wide digital media presentations. Today, the media presentations include rooftop mega-billboard, wayfinding systems, and outdoor digital signs. Provision is made for a central entertainment control room and connectivity to the major entertainment carriers: Bell, Shaw, and TELUS.

## Cellular Communications

Tango successfully negotiated and designed cellular coverage extensions at major airports, hospitals, residential towers and commercial office towers. The negotiating strategy constantly changes to keep pace with technology.

Tango determines the quality of cellular coverage for all carriers, works with carriers on latest technology (xG), and then issues stamped engineering drawings for cellular equipment designs.

## Engagement

When you contact Tango, you will talk with a technology designer who will provide a strategy based on your needs and our extensive experience. The full-weight of Tango's design team will support you.
